Introducing First time ever Sana's Mini Water Softner For Individual Bathroom & Kitchen Treating Borewell or Tanker Hard water

APPLICATION : Sana's Mini Water Softner is to be installed outside bathroom and before the in-let of water supply line. Once the Hard water passes through Sana's mini water softner your hard water or tanker water or borewell water will get treated through the process called NAC (Nucleation Assisted Crystallization) converting hard water to soft water.

ADDITIONAL FEATURE : Sana's Water Softner also comes with a special Attachment which has a special VALVE installed called PRV { Pressure Reducing Valve}. This Attachment is very useful for those residing in High Rise Towers having very high pressure damaging all bathroom fittings & water appliances, this valve will reduce your high pressure to your required pressure. This Attachment also comes with two Pressure Gauge, one will show bathrooms Inlet pressure and other will show the pressure that you have set in the PRV. For more details regarding PRV and Pressure kindly log on our website : www.sanasaquagreen.com

Benefits of Sana's Mini Water Softner 2 in 1 product

1. Neutralizing Hard Water Effects
2. Controlling high water pressure.

WHAT IS SANAS AQUA GREEN WATER SOFTNER

It is an alternative to conventional ion exchange based water softeners, reverse osmosis or other chemical based systems that prevent scale.

Recent restrictions placed upon the above mentioned technology lead to an environment friendly, cost effective solution for hard water, Sana's Aqua Green Water Softener completely takes care of the primary cause of scale forming cations viz. Ca^{2+} and Mg^{2+} .

The calcium carbonate crystals grow steadily. They are **very stable** and **cannot dissolve** (incapable of forming scale) in the water.

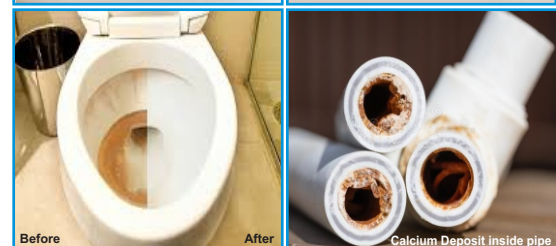

Glass grains crystallization sites provide **increased nucleation sites** for the formation of submicron sized CaCO_3 crystals. Hence this amazing process is called **NUCLEATION ASSISTED CRYSTALLIZATION** or **NAC**

SPECIAL FEATURES

- **No salt** required
- **No backwashing** required
- **No regeneration** cycle required
- **No increase in sodium content in water**
- Removes the previous scales of plumbing
- Catalytic process converts **Ca** and **Mg** into harmless micro crystals
- **Maintenance free.**
No extra cost incurred.
- **No chemicals** required for disinfection
- **No electrical connections required**
- No drain connections required
- No control valves required
- Very easy to install
- Great savings against conventional salt based water softeners
Provide the best quality healthy water without the addition of Sodium or Phosphates
- Life Span : 3 to 5 years depending upon the feed water conditions

HARD WATER EFFECTS BEFORE SOFT WATER EFFECTS AFTER
